

My commitment to service, integrity, and community shapes how I support Belmont's Christ-centered mission. I believe that every person deserves respect, opportunity, and encouragement to grow. In my work, I seek to create technology solutions that connect students, faculty, and staff more effectively, helping everyone thrive in an environment that values character and collaboration.

Daily habits of reflection and learning keep me grounded in empathy and a growth mindset. When I develop a feature to streamline student enrollment or design a collaborative learning tool, I focus on how these improvements will help real people achieve their goals. This approach aligns with Belmont's vision to integrate academic excellence with personal development.

I am an active member of a local faith community, where I volunteer as a mentor and organize educational workshops. These experiences have taught me how to listen well, communicate clearly, and work alongside diverse groups. Leading discussions and events has shown me the impact that thoughtful support can have on individuals' confidence and success, insights I bring to every project I undertake.

Belmont's emphasis on purpose, inclusion, and lifelong learning resonates with my own values. I aim to contribute by building accessible, user-friendly web and IT solutions that foster meaningful connections and support the university's strategic goals. By partnering with faculty and staff, I hope to enhance Belmont's digital landscape in ways that advance its mission of serving the whole person intellectually, socially, and personally.
