

Hi Tavus Team,

I think what you're building with AI Humans is amazing machines that can actually feel human when they talk back. Being a person who is curious about how things work and making things better, that's the kind of future I want to be part of.

In my internships at Apple, Vanderbilt, and a startup, I worked across the stack from React frontends to backend APIs and delivered tools that both teammates and clients used daily. I also learned how much I enjoy working directly with users, taking their feedback, and turning it into better products.

I'd bring that same mix of coding skills, client experience, and problem-solving grit to Tavus, helping make your platform smoother, inspiring with demos, and making every interaction feel magical.

Thanks,

Anmol
