Dear Hiring Team,

I am excited to bring my passion for innovation and deep expertise in web development and AI to Lipscomb University's IT team. Over three years of full-time internships at Apple, Vanderbilt IT, and Maroon have honed my full-stack engineering, cloud services, and machine learning skills. I'm eager to apply to enhance your website, digital platforms, and data-driven initiatives.

My background includes:

- Designing and maintaining responsive, accessible websites with CMS and LMS integrations that support student enrollment, faculty training, and administrative workflows
- Implementing AI tools and data pipelines to automate processes, personalize user experiences, and generate actionable analytics insights.
- Collaborating across departments, marketing, HR, and academic, delivering training modules and documentation to empower users at every level

Though early in my career, my internship portfolio demonstrates my ability to learn quickly, contribute fresh ideas, and drive projects end-to-end on time. I would be grateful for the opportunity to discuss how my diverse skills and commitment to Lipscomb's mission can support your digital transformation goals.

Thank you for your consideration. I look forward to the possibility of connecting.

Thanks,
Anmol Baruwal
