Dear BNSF | Tech Team,

I am excited to apply for the BNSF Tech Trainee Program, an incredible opportunity to contribute to one of North America's largest and most impactful freight railroads. As a recent Computer Science graduate with hands-on experience at top organizations, including Apple and Vanderbilt IT, I bring a technical foundation built on rigorous software engineering, AI/ML, and cloud infrastructure knowledge.

What excites me most about BNSF is your strong commitment to safety, inclusion, and operational excellence values that I hold deeply. Throughout my journey, whether developing scalable full-stack solutions or designing educational experiences in STEAM, I have learned that true innovation flourishes in environments that embrace diverse perspectives, foster collaboration, and genuinely care for the user impact. These principles align perfectly with the culture BNSF is cultivating.

Your Tech Trainee Program's promise of immersive learning through mentorship, cross-functional collaboration, and exposure to varied engineering domains greatly appeals to my growth mindset and eagerness to contribute meaningfully. I am confident my experience in data pipelines, product ownership, and problem-solving in fast-paced environments equips me to bring fresh ideas, agility, and reliability to help transform rail operations through technology.

Beyond my technical skills, I am driven by the mission to improve communities and industries by building technology that is safe, accessible, and scalable. I look forward to supporting BNSF's vision by contributing to impactful projects that enhance efficiency and reliability while making freight rail smarter and more sustainable.

Thank you for considering my application. I am eager to grow alongside your team and help drive the future of freight rail.

Sincerely,
Anmol Baruwal
